

A Public Lecture with Professor Chris Stringer

The last 100,000 years of human evolution

100,000 years ago there were at least 4 kinds of humans on Earth. Our species had evolved in Africa and was beginning to emerge from there, the Neanderthals had evolved in western Eurasia, the Denisovans in eastern Eurasia, and Homo floresiensis in Indonesia. How did these different populations relate to each other, and why are we the only humans left today?

Friday 8th July 2016

Lecture to start at 6:00pm

Brisbane City Hall

Ithaca Auditorium

64 Adelaide St, Brisbane

Lecture followed by the official launch of the Research Centre of Human Evolution and dinner, tickets can be purchased separately at a later date.
